

Omid Badkoubeh

Senior Frontend Engineer

omid.badkoubeh@gmail.com | linkedin.com/in/OmidBadkoubeh | github.com/OmidBadkoubeh | Remote

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 7+ years of experience building high-performance, scalable web and mobile applications with Next.js, React, and React Native. Frontend team lead with a proven track record in data visualization (WebGL/Three.js), Web3 integrations, monorepo architecture, and cross-platform development. Passionate about backend engineering and actively building a full-stack TypeScript application end-to-end with Bun, Hono, tRPC, and Drizzle ORM, applying SOLID principles and clean architecture. Adept at owning technical decisions, optimizing build pipelines, and establishing design systems in fully distributed environments.

TECHNICAL SKILLS

- Languages & Core: TypeScript, JavaScript (ES6+), Python, HTML5, CSS3
- Frontend: React, Next.js, React Native, React Native Web, Three.js/WebGL
- State & Data: TanStack Query (React Query), Redux, tRPC, Apollo Client, GraphQL
- UI & Styling: TailwindCSS, Material UI, ShadCN, BaseUI, CSS Modules, React Native Paper
- Backend & Databases: Node.js, NestJS, Hono, FastAPI, Bun, REST APIs, Drizzle ORM, SQL/PostgreSQL, NoSQL/MongoDB
- Testing: Jest, React Testing Library, Cypress, Playwright
- Web3 & Maps: Wagmi, Viem, WalletConnect, Leaflet, OpenStreetMap
- DevOps & Practices: Docker, Fastlane, Git, CI/CD, Monorepo architecture, Storybook, Atomic Design, SOLID, Clean Architecture, Design Systems

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer, Frontend Team Lead — Corvic / Codaze

04/2024 – 05/2026 | Remote

- Led the frontend team building a data-heavy enterprise AI dashboard with Next.js and tRPC, serving AI teams at Fortune 500 enterprises, while improving data-fetching efficiency and state management across complex workflows.
- Built a custom Three.js/WebGL scatterplot rendering 10M nodes at 60fps and 1M nodes at a smooth 120fps, optimizing memory allocation and frame rates for seamless 2D/3D exploration.
- Drove migration to a monorepo, extracting shared UI and business logic into reusable packages consumed by both the dashboard and an embeddable agent-chat widget (custom JS install for third-party websites), accelerating feature development by 2x+ and simplifying cross-app UI maintenance.
- Safeguarded critical logic with Jest unit tests, improving reliability across frequent releases.

Senior Frontend Engineer — Embark

04/2022 – 01/2024 | Remote

- Owned all frontend architecture decisions for a decentralized Web3 dashboard built with Next.js and Wagmi/Viem, supporting connection of virtually any Ethereum-compatible wallet and integrating WalletConnect for a polished connection UX with real-time blockchain event listening and smooth transaction states.
- Structured the UI as a reusable component system using atomic design, improving consistency and development speed across the product.

- Built a responsive, SEO-optimized landing page from scratch with Next.js and TailwindCSS, achieving 95+ scores across all Core Web Vitals.
- Covered critical application flows with Jest unit tests to ensure stability during rapid iteration.

Senior Developer & Technical Team Lead — Youtopin

07/2021 – 05/2022

- Built a CI/CD deployment pipeline from the ground up using Fastlane, auto-triggering on PR merges and cutting deploy time from ~1 hour to 20 minutes.
- Led development of iOS and Progressive Web App (PWA) projects from a single codebase using React Native Web, sharing business logic and a UI component library organized with atomic design to reduce overhead.
- Validated critical user journeys across the React Native apps with Cypress end-to-end tests.
- Containerized the PWA project with Docker to streamline local development and deployment workflows.
- Mentored junior engineers, conducted code reviews, and aligned front-end technical strategy with product goals.

React & React Native Developer — Bakoot

05/2019 – 05/2021

- Delivered a food-delivery ecosystem serving ~10K monthly users and ~100 orders/day: the consumer-facing Pizza.ir app (React Native), a courier Android app (React Native), and the company blog (React).
- Built an admin geo-fencing feature letting operators define supported delivery regions by drawing polygons on interactive maps with Leaflet and OpenStreetMap.
- Developed the courier app for viewing assigned orders and destinations, accepting deliveries, and navigating via in-app directions or handoff to Waze/Google Maps.
- Built the Bakoot corporate website and SydneyGentleCare.com.au with Next.js and TailwindCSS for high performance and SEO.

PROJECTS

Full-Stack TypeScript Application — Personal Project (In Progress)

- Designing and building a full-stack TypeScript product end-to-end: backend with Bun, Hono, tRPC, and Drizzle ORM; frontends with Next.js.
- Structured as a monorepo with shared UI and logic packages reused across three web apps (main app, admin panel, and vendor panel), enabling consistent, high-velocity development.
- Follows a test-driven UI workflow with Storybook, building and validating each component in isolation before composing it across the apps.

EDUCATION

Master of Science (M.S.), Computer Science: Artificial Intelligence

Islamic Azad University, Science and Research, Tehran — 2019 – 2022

Bachelor of Science (B.S.), Applied Mathematics and Computer Science

Shahid Beheshti University, Tehran — 2013 – 2018
